- Pick a 'target' number.
- Pick 5 more 'Equation Fun' cards.
- Use as many of your 5 cards as possible to build an equation to reach the target number (don't forget 'order of operations')
- Write a story problem to match your equation.
- Score 1 point for each card used – double if all 5 cards are used.
- Use the table to keep a record of each equation and story problem.
- The first row is an EXAMPLE

Target Number	Cards picked	Equation	story problem	score
5	0,4,2,2,9	$0 \times 4 + 9 - 2 - 2 = 5$	Last week Joe bought 4 game tickets but lost all of them. This week he bought 9 more tickets. He gave 2 to his family and 2 to his grandparents. How many tickets does Joe have left for himself?	10
